

Big Change for Medicaid Reimbursement of Prenatal Care

WILL YOUR OFFICE BE READY?

On May 8, 2020, New Jersey will enforce new data reporting requirements as condition of Medicaid payment for prenatal care.

Under new law, prenatal providers must submit a Perinatal Risk Assessment Plus (PRA Plus) for all uninsured and government-sponsored insurance (i.e. Charity Care, Medicaid, Medicaid Managed Care, Medicare, etc.) patients. Providers who fail to submit data for these patients in the PRA Plus System cannot be paid for prenatal services.

Free Assistance to Implement PRA Plus

To help providers implement the PRA data system, the state has contracted with Family Health Initiatives (FHI) for technical assistance. FHI services are offered at NO COST to providers and the agency's assistance includes all aspects of system implementation, navigation and management.

To avoid the headaches of a rushed implementation, providers are strongly encouraged to transition to the PRA Plus well before the May 8th deadline.

Contact FHI for
experienced and free
assistance with PRA Plus
